

# LIFE *ELIA-RTE* project

## Creating green corridors under overheads lines

***Creation of training modules for the staff of ELIA and RTE, vade mecum for electricity operators, European public and private forest managers***

### Objectives

Through training modules and a handbook, we aim to teach electricians and forest technicians an alternative management for corridors, ensuring the safety of high-voltage lines.

### How ?

#### 1. Training modules :

Offering to the staff of ELIA and RTE a training consisting in 4 modules:

- Species and habitats encountered in the high-voltage lines
- Legislation on the management of vegetation in sites with various laws and constraints (Natura 2000, nature reserves, ...)
- Techniques of alternative management under high-voltage lines
- - Creating partnerships with other rural stakeholders for a sustainable management of high-voltage line sites.

#### 2. Vademecum :

Making two vademecum of good practice for staff ELIA and RTE, European electricity operators and forest managers concerned by the transition from a high-voltage line.

These vademecum will be written out in close synergy with stakeholders to ensure the long-term feasibility of the proposed measures.

*The LIFE ELIA project is co-financed by the European Commission*
